Product Information evening and a screening of Earth

EARTH, a film by the world renowned BBC Natural Film History Unit, takes audiences on an unforgettable journey around the planet, using the natural history of the planet to show its effects on all of life. It tells its story through the lives of three main characters – polar bear, elephant and humpback whale - and their offspring, to show the hardships faced by creatures whose lives are dominated by a migratory existence in a world that is fast changing. The film offers audiences a chance to recognize and celebrate the beauty of the Earth, but is also a reminder of the ecological fragility of our planet and the creatures that live on it. Rated G
